No scientific work proceeds without conceptual foundations. In language science, our concepts about language determine our assumptions, direct our attention, and guide our hypotheses and our reasoning. Only with clarity about conceptual foundations can we pose coherent research questions, design critical experiments, and collect crucial data. This series publishes short and accessible books that explore well-defined topics in the conceptual foundations of language science. The series provides a venue for conceptual arguments and explorations that do not require the traditional book-length treatment, yet that demand more space than a typical journal article allows.

In this series:

1. N. J. Enfield. *Natural causes of language*.

## 1.1 About literature

Comrie1981 is a useful introduction to typology . It deals with languages of the whole world, not restricting itself to Indo-European languages. Dionysios Thrax was also an important figure.
